

FoxPay Payroll Software

Features

This software allows for simple and efficient processing of timesheets and paycheques. *FoxPay Payroll Software* can optionally be set up to assume the normal hours for each employee. If the employee works as usual or is salaried, only one mouse click is needed to process the pay for that employee.

Deductions such as CPP, EI, RSP, Union and employee-requested extra tax can be applied to applicable employees' payroll calculations.

Users may define up to 5 pre-tax items (such as taxable benefits) and up to 5 post-tax items (such as after tax deductions) per company. Pre- and post-tax items may be fixed dollar amounts or percentage amounts.

The software also contains a *Reverse Payroll Calculator* feature which will determine the amount of gross pay required to result in a specific net pay amount. It is helpful for small business owners and for calculating after tax bonuses.

FoxPay Payroll Software can be integrated with most other popular accounting programs.

A Direct Deposit Module is also available.
